

SUJIT KUMAR

Senior Product Designer | UX/UI Designer

ktsujeet1997@gmail.com | [092884 98199](tel:09288498199) | sujit-folio.vercel.app | linkedin.com/in/sujitkt

EXECUTIVE SUMMARY

Product Designer with 5 years of experience across Enterprise SaaS, IoT, ERP/Logistics, and B2B platforms, with a track record of leading 0→1 product design and scaling experiences for enterprise clients. Combines product discovery, UX research, and design-systems thinking with data-informed decision making — using usability research and A/B testing to validate design direction and influence roadmap priorities. Builds accessible, WCAG-conscious interfaces and mentors junior and aspiring designers, with direct design contributions supporting ₹7Cr+ in platform business impact across 50+ enterprise brands and 5M+ users. Applies AI-assisted workflows (ChatGPT, Claude, Figma AI) selectively to speed up research synthesis and early-stage prototyping, while keeping evaluation and final design decisions human-led.

CORE COMPETENCIES

Product Strategy & Discovery • Product Thinking & Prioritization • User Research • Usability & A/B Testing • Information Architecture • Interaction Design • Design Systems (Atomic Design) • Accessibility & WCAG • Enterprise SaaS Design • ERP & Workflow Design • IoT & Embedded UI Design • Systems Thinking • Prototyping & Validation • Stakeholder Management • Cross-Functional Collaboration • Design Mentorship • 0→1 Product Development

PROFESSIONAL EXPERIENCE

Senior Product Designer (Freelance) Jan 2026 – Present

Selected Client Projects

Mirari Surface — Smart Home IoT Platform

- Led end-to-end design of a smart-home IoT ecosystem spanning an embedded touch-panel interface and companion mobile app; chose a shared interaction language across both surfaces so users would not need to relearn controls when switching between panel and app.
- Designed onboarding and device-management flows within ESP32-S3 hardware constraints, prioritizing a small set of high-frequency actions over exhaustive configuration screens to keep the interface usable on limited hardware.
- Designed scene-creation flows enabling users to group and automate multiple devices, balancing flexibility for advanced users against simplicity for first-time setup.
- Partnered directly with hardware and firmware teams from early discovery so technical constraints surfaced before high-fidelity design work began — contributing to a 75% faster go-live timeline versus the team's prior integration cycle.

CA Operating System — SaaS Platform for Chartered Accountant Firms

- Led product strategy and UX for a SaaS platform reimagining fragmented Chartered Accountant firm operations into one connected ecosystem, replacing 6–7 disconnected tools (spreadsheets, WhatsApp, personal calendars, manual reminders) with a single connected system.
- Conducted end-to-end operational research across lead management, client onboarding, document collection, compliance, and payments; identified that operational fragmentation — not accounting complexity — was the root usability problem, reframing the product from a dashboard into a full operating system.
- Defined product architecture and information model before visual design, mapping relationships across leads, clients, documents, payments, and compliance around a single client profile ('Client Timeline') and restructuring navigation around user tasks to reduce cross-module context switching.
- Architected for scale from day one — role-based permissions, multi-tenant structure, and organization-level settings — and designed automation workflows (recurring compliance reminders, payment follow-ups, auto-generated document requests) to remove repetitive manual coordination across the client lifecycle.

Senior UX/UI Designer (Contract) | Cooter:Labs — LodgEdge Pristine Logistics Apr 2025 – Dec 2025

- Redesigned logistics ERP workflows after research surfaced usability issues affecting 70%+ of surveyed users; prioritized the top friction points over a full rebuild to ship measurable improvement within the contract timeline.

- Restructured information architecture and task flows based on task-analysis sessions with active users, cutting redundant manual steps across core logistics operations.
- Built and scaled a modular design system on Atomic Design principles, choosing reusable components over one-off screens to reduce design-to-dev handoff time; ran agile sprints with product, engineering, and business stakeholders.

Product Designer | O4S — B2B SaaS Channel Loyalty Platform May 2023 – Mar 2025

- Owned end-to-end product design for a white-label loyalty platform spanning mobile and enterprise dashboard experiences across multiple markets, with design contributions supporting ₹7Cr+ in platform business impact and 25% YoY growth across 50+ enterprise brands and 5M+ channel partners.
- Identified high drop-off in a single long-form onboarding flow; chose to split it into three logical sections (general details, business information, address) with save-and-resume — over a single-page redesign — after interviews showed users often completed onboarding across multiple sessions. Validated the change through A/B testing and secured buy-in from product managers and operations before rollout.
- Mentored junior and peer designers through design reviews and structured feedback; separately mentored aspiring designers outside the organization — 3 of 4 mentees are now working professionally as junior designers.
- Built scalable white-label design frameworks with Product, Engineering, Operations, and Sales, choosing token-based theming over per-client custom builds; ran accessibility audits across the dashboard and white-label app, prioritizing WCAG fixes that reduced onboarding time and downstream development rework.

UX/UI Designer | Oodles Studio Apr 2022 – Apr 2023

- Delivered end-to-end UX for web and mobile products across waste management, ed-tech, e-commerce, and sustainability domains, adapting research and design approach per domain rather than applying a single playbook given how different each user base's context and constraints were.
- Defined user journeys, information architecture, wireframes, and high-fidelity interfaces, prioritizing the flows with the highest user drop-off first when timelines were tight.
- Worked closely with engineering to keep designs buildable within sprint constraints, flagging scope trade-offs early rather than after handoff.

UX/UI Designer | JoonWeb Oct 2021 – Mar 2022

- Designed wireframes, UI screens, and front-end style guides for early-stage web products, establishing simple, reusable interaction patterns so founders could self-serve new pages without ongoing design support.
- Worked directly with founders and developers in a fast-paced startup environment, prioritizing shipping usable interfaces quickly over polish given limited resources.

EDUCATION

B.Com in Accounting — Babasaheb Bhimrao Ambedkar University, Bihar (2018)

Background in accounting and business analysis informs a data- and process-driven approach to design — evident in ERP, logistics, and B2B SaaS work where operational logic and business rules shape the interface.

CERTIFICATIONS

Google UX Design Certificate • Graphic Elements of Design

TOOLS & TECHNOLOGIES

Design: Figma, Figma Make, Adobe XD, Illustrator, Photoshop

AI-Assisted Workflow: Use ChatGPT and Claude to synthesize raw research notes into thematic insights, and Figma AI for rapid low-fidelity variant generation during early exploration — speeding up initial concepting while keeping evaluation and final design decisions manual.

Collaboration: Notion, Slack, Asana
